**Professional Objective**

Utilize training and Asterisk system administrator skill set to help develop world-class training and certification. Train others to do the same.

**Employment History****Senior System Administrator**

*Cox Radio Interactive*

*August 2007–Present*

Migrated entire technology team from CVS to Subversion leading to an easier to manage code base. Improved the internal software release tool, which decreased the time needed to deploy new software into production. Designed and built an entire new hardware architecture for a new version of our flagship products. Created and built a fully N+1 MySQL database server cluster. Helped manage a release of a new version of our flagship product. Developed many internal tools for monitoring overall network and system health.

**Sys Admin III**

*Florida Department of Health*

*March 2006–June 2007*

Designed deployed medium scale Asterisk VOIP solution for department's IT help desk. Maintained and supported state-wide, multi-agency, contact directory using Red Hat Directory Server, with data from various different agencies. Created and maintained an automatic Linux install system, reducing time spent installing Linux considerably. Researched Linux migration paths/plans for future Linux needs or requirements of the agency. Prepared and presented training at internal department conferences.
