Hiring Manager

Apple

Dear Hiring Manager,

My name is Derek Carter and I'm a cloud infrastructure specialist with twenty-six years of experience. I was made aware of your Software Engineer: DevOps/Automation Engineer posting from a search of the Apple jobs board, and I'm sharing my interest in helping Apple reach it's goal of automating developer tooling.

My most recent experience was leading a team of three DevOps engineers at Unchained to create and socialize a new GitLab CI based platform. I improved developer productivity, while reducing costs by implementing DevOps related practices and tooling.

I'd be a great asset to the team at Apple.

My experience leading DevOps teams has enabled my former employers to streamline their development workflows and foster more efficient, reliable software delivery.

I have a proven track record of helping companies adopt modern infrastructure automation practices, resulting in improved developer experiences, more consistent deployments, and accelerated release cycles.

Notably, I was one of the first developers on the Ansible project, where I contributed significantly by writing the initial SELinux modules.

I've attached my resume to this application, and you can find my entire work history on my LinkedIn profile <https://www.linkedin.com/in/goozbach/>

I look forward to hearing from you and wish you the best.

Sincerely,

Derek Carter
